## 1 Introduction

This guide explains the process to install PROIV V12 on Windows and UNIX platforms. The V12 installer does not offer the user a choice of which components may be installed, instead it installs all product components. There are two installation executables, one for the Server and another for the MFC Client.

You can install PROIV on Windows without any third-party software. For supported UNIX platforms you must install and configure the Java Runtime Environment. Refer to the individual platform sections for the pre-requisites of each.

Note: PROIV version numbers will consist of three numbers of the form:

*Major.Minor.Build*

The *Major* number indicates the current Product release e.g version 12 for this release.

The *Minor* number will be three digits, in steps of 100 e.g. 12.100, 12.200 etc., indicating a maintenance release, or three digits in steps of 1, indicating a service release. E.g. 12.101, 12.102, 12.103 etc. i.e. 12.102 is the second service release to maintenance release 12.100.

The *Build* number is incremented automatically by the PROIV build infrastructure each time a build of the software takes place and so the higher the number the more recent the build. This number is reset to zero each time the minor version is increased.

## 2 Installing Server Software on Windows

Version 12 has a similar product installer to previous versions of PROIV with only one panel with which to submit configuration details. The installation process is similar on all platforms but on Windows the installation must be carried out by a user with Administrator privileges.

The installation proceeds through a set of panels, which you move forward or backward using **Previous** and **Next** buttons. If you wish to abort the installation, then click **Cancel** at any stage during installation. To start the installation process, double-click the **PROIV Version 12 Windows installation executable**.

### Upgrading an existing installation

#### 2.1.1 Upgrading from previous major releases to Version 12

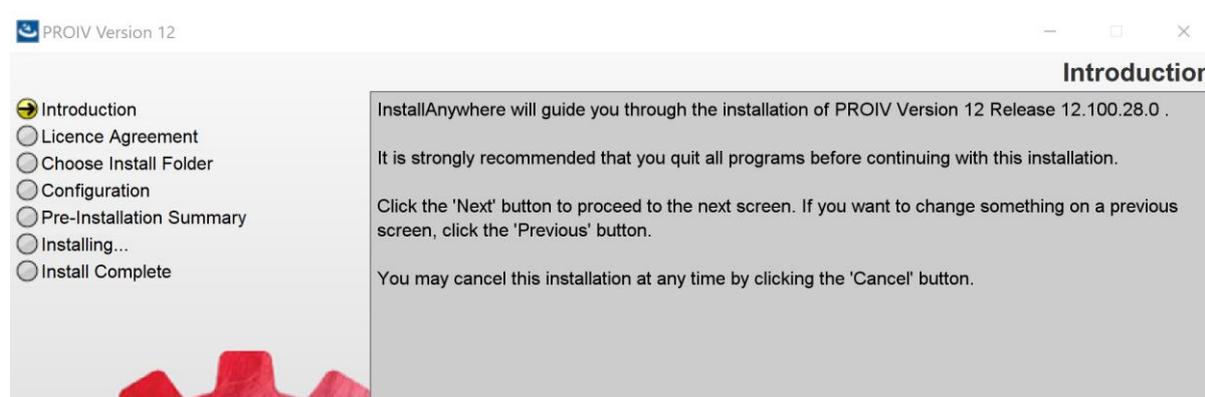

PROIV version 12 is not 'gen' compatible with any previous major versions of PROIV. A mandatory Re-build of all code is required when moving to PROIV version 12. If you are upgrading to v12, you must take a backup of your boots folder; export your application source code and import into v12 and then perform a rebuild of the application. Additionally, all existing set up options will need to be reconfigured using the PROIV Dashboard.

Note: Contact PROIV Support for guidance if you are upgrading from a much older version of PROIV as additional processes may be required.

#### 2.1.2 Upgrading from an older version 12 release

PROIV version 12 will maintain 'gen' compatibility with prior releases of version 12 as new versions are released. A mandatory Rebuild is not required when upgrading, however it is recommended you take a backup of your boots folder by exporting your application source code and importing into the upgraded v12 and then perform a rebuild of the application's functions. All existing set up options will remain as previously configured.

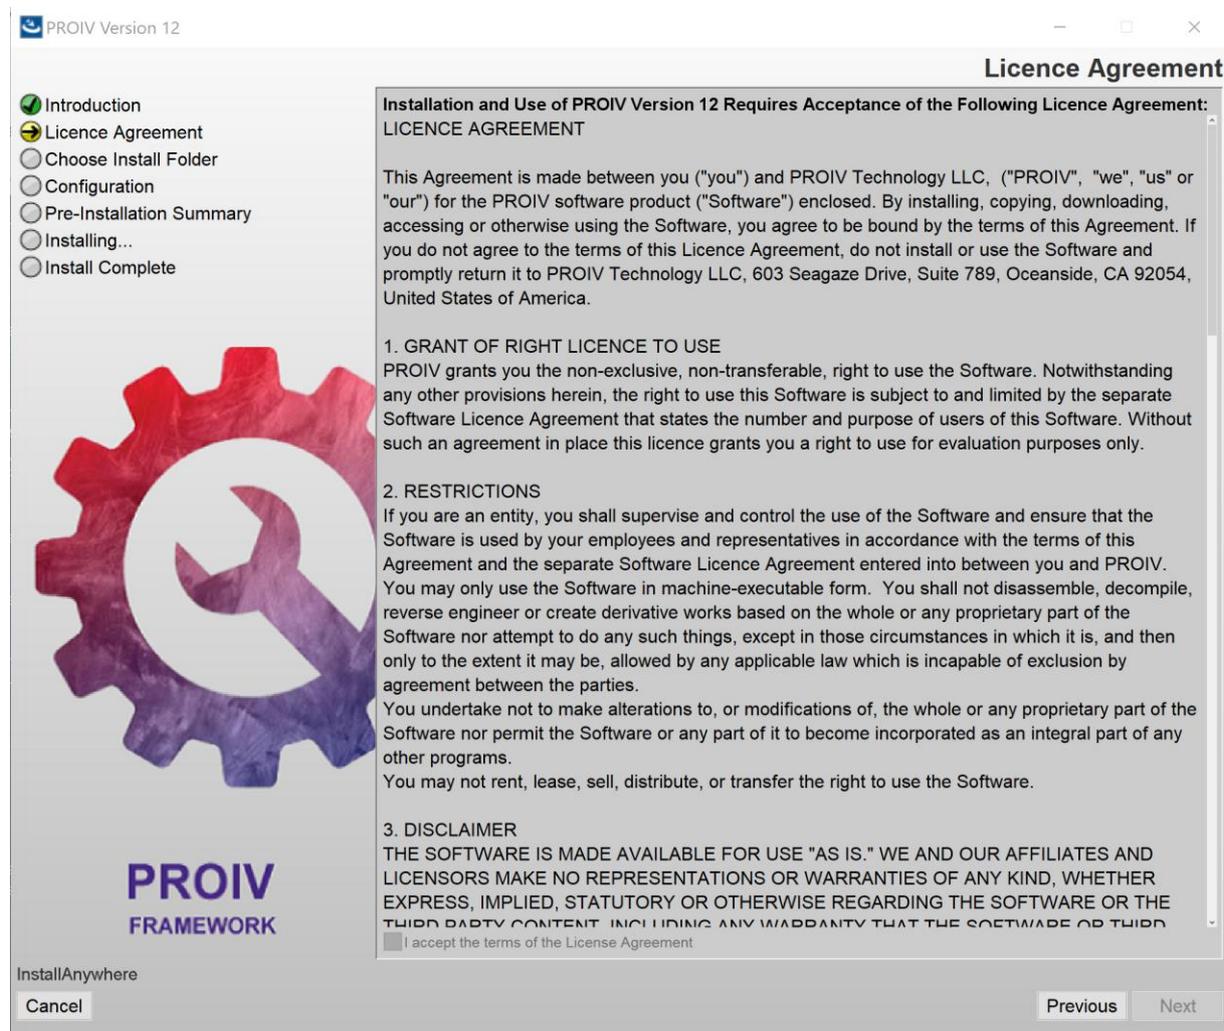

### Introduction Panel

Click **Next**.

## Licence Agreement

Read through the agreement and then click I accept the terms of the Licence Agreement and click Next.

**Licence Agreement**

Installation and Use of PROIV Version 12 Requires Acceptance of the Following Licence Agreement:  
LICENCE AGREEMENT

This Agreement is made between you ("you") and PROIV Technology LLC, ("PROIV", "we", "us" or "our") for the PROIV software product ("Software") enclosed. By installing, copying, downloading, accessing or otherwise using the Software, you agree to be bound by the terms of this Agreement. If you do not agree to the terms of this Licence Agreement, do not install or use the Software and promptly return it to PROIV Technology LLC, 603 Seagaze Drive, Suite 789, Oceanside, CA 92054, United States of America.

**1. GRANT OF RIGHT LICENCE TO USE**  
PROIV grants you the non-exclusive, non-transferable, right to use the Software. Notwithstanding any other provisions herein, the right to use this Software is subject to and limited by the separate Software Licence Agreement that states the number and purpose of users of this Software. Without such an agreement in place this licence grants you a right to use for evaluation purposes only.

**2. RESTRICTIONS**  
If you are an entity, you shall supervise and control the use of the Software and ensure that the Software is used by your employees and representatives in accordance with the terms of this Agreement and the separate Software Licence Agreement entered into between you and PROIV. You may only use the Software in machine-executable form. You shall not disassemble, decompile, reverse engineer or create derivative works based on the whole or any proprietary part of the Software nor attempt to do any such things, except in those circumstances in which it is, and then only to the extent it may be, allowed by any applicable law which is incapable of exclusion by agreement between the parties.  
You undertake not to make alterations to, or modifications of, the whole or any proprietary part of the Software nor permit the Software or any part of it to become incorporated as an integral part of any other programs.  
You may not rent, lease, sell, distribute, or transfer the right to use the Software.

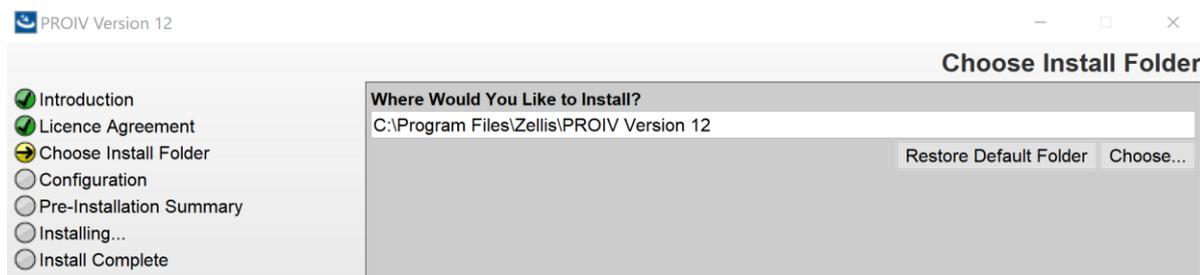

**3. DISCLAIMER**  
THE SOFTWARE IS MADE AVAILABLE FOR USE "AS IS." WE AND OUR AFFILIATES AND LICENSORS MAKE NO REPRESENTATIONS OR WARRANTIES OF ANY KIND, WHETHER EXPRESS, IMPLIED, STATUTORY OR OTHERWISE REGARDING THE SOFTWARE OR THE THIRD PARTY CONTENT, INCLUDING ANY WARRANTY THAT THE SOFTWARE OR THIRD PARTY CONTENT IS FREE OF VIRUSES OR OTHER HARMFUL COMPONENTS.

I accept the terms of the License Agreement

InstallAnywhere  
Cancel Previous Next

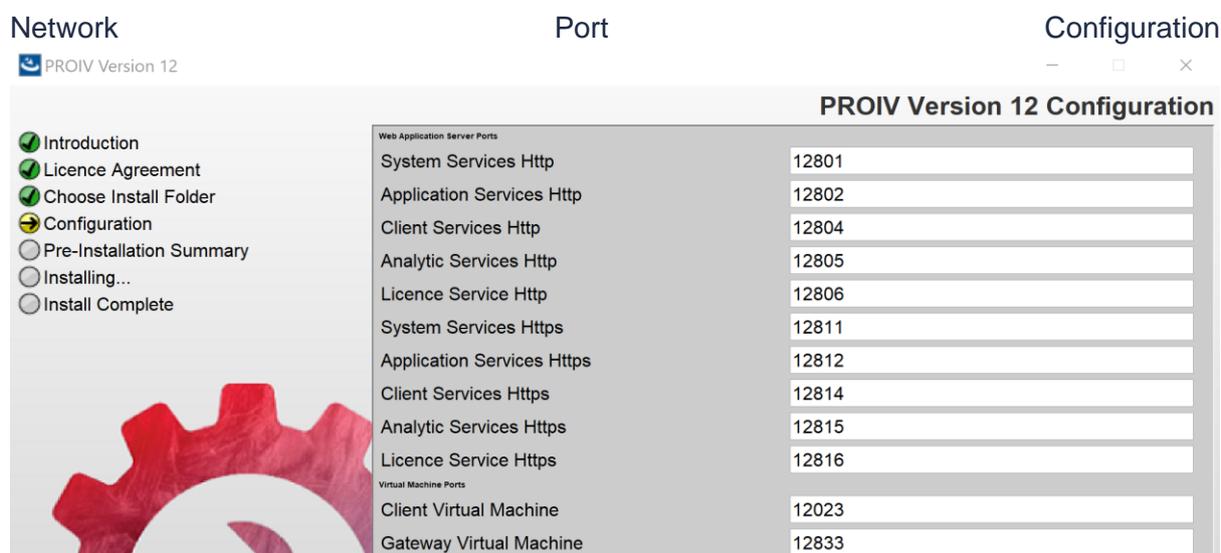

Note: You cannot accept the agreement without scrolling to the bottom; this is to encourage you to read and be aware of the terms of the Licence Agreement. Zellis reserves the right to amend the terms of the licence agreement when necessary.

## Installation Location

Click Choose to change the destination folder for the installation and click Next.

Note: PROIV Version 12 does not support the upgrade of an existing older major PROIV installation. However, you can install PROIV Version 12 alongside older major releases such as version 10 or 11.

Configure PROIV as follows:

Under Web Application Server Ports group and Virtual Machine Port group, enter the TCP/IP listening port numbers for all port types. All these ports must be unique. By default, the installation process offers ports which are not in use at the time, the panel appears.

After submitting the panel, the installer will notify you if the port number entered is in use. You must re-enter the configuration information in this instance.

To enable support for external databases such as Oracle, PostgreSQL or SQL Server, select the External Database Support checkbox.

Note: The default PROIV Version 12 ports are unique to version 12, other versions have their own unique port numbers.

## Initial Database Configuration

On the Database Type list, select the required database. For example, Oracle or PostgreSQL.

**PROIV Virtual Machine Features**

External Database Support

**Database Type**

Oracle

Host

Port

Database Name

User Name

Password

In the Host box, enter the host name or the IP address of the database server.

In the Port box, enter the port number the database server is configured to use.

In the Database Name box, enter the name of the database.

Enter the Username and Password for the database in the respective boxes.

**Note:** If you do not configure external database during installation but want to connect to the external database after installation, login to PROIV Dashboard and update the database configuration as required. Refer to PROIV Help for more information.

**Note:** The installer does not validate any of the parameters entered on this screen.

Click **Next**.

## Windows Service Installation

**System Installation**

Local System  Local Service

It is possible to install the PROIV services on Windows as the Local Service account. This will have the effect of reducing the access rights given to the service. If you wish to do this then select “Local Service” and the services will be installed with the local account known as NT Authority/LocalService.

The files in the PROIV installation will have their permissions updated to allow this account to be able to read and write to them. It is important to note that if your application uses other interfaces and directories then it is your responsibility to ensure that those external interfaces give the LocalService account sufficient permission to continue to operate with them.

## Provide License During Installation

**Upload licence file (leave unchecked for default licence)**

Licence file location

**Note:** The installer will advise if any incorrect configuration parameters have been entered.

You will be invited to correct the relevant parameters. The installation will not proceed unless the correct parameters are entered.

PROIV Version 12 installs a default licence. However, if you want to choose from a location, click Choose and locate the licence file.

**Note:** Earlier PROIV Versions' licence files cannot be used with PROIV Version 12.

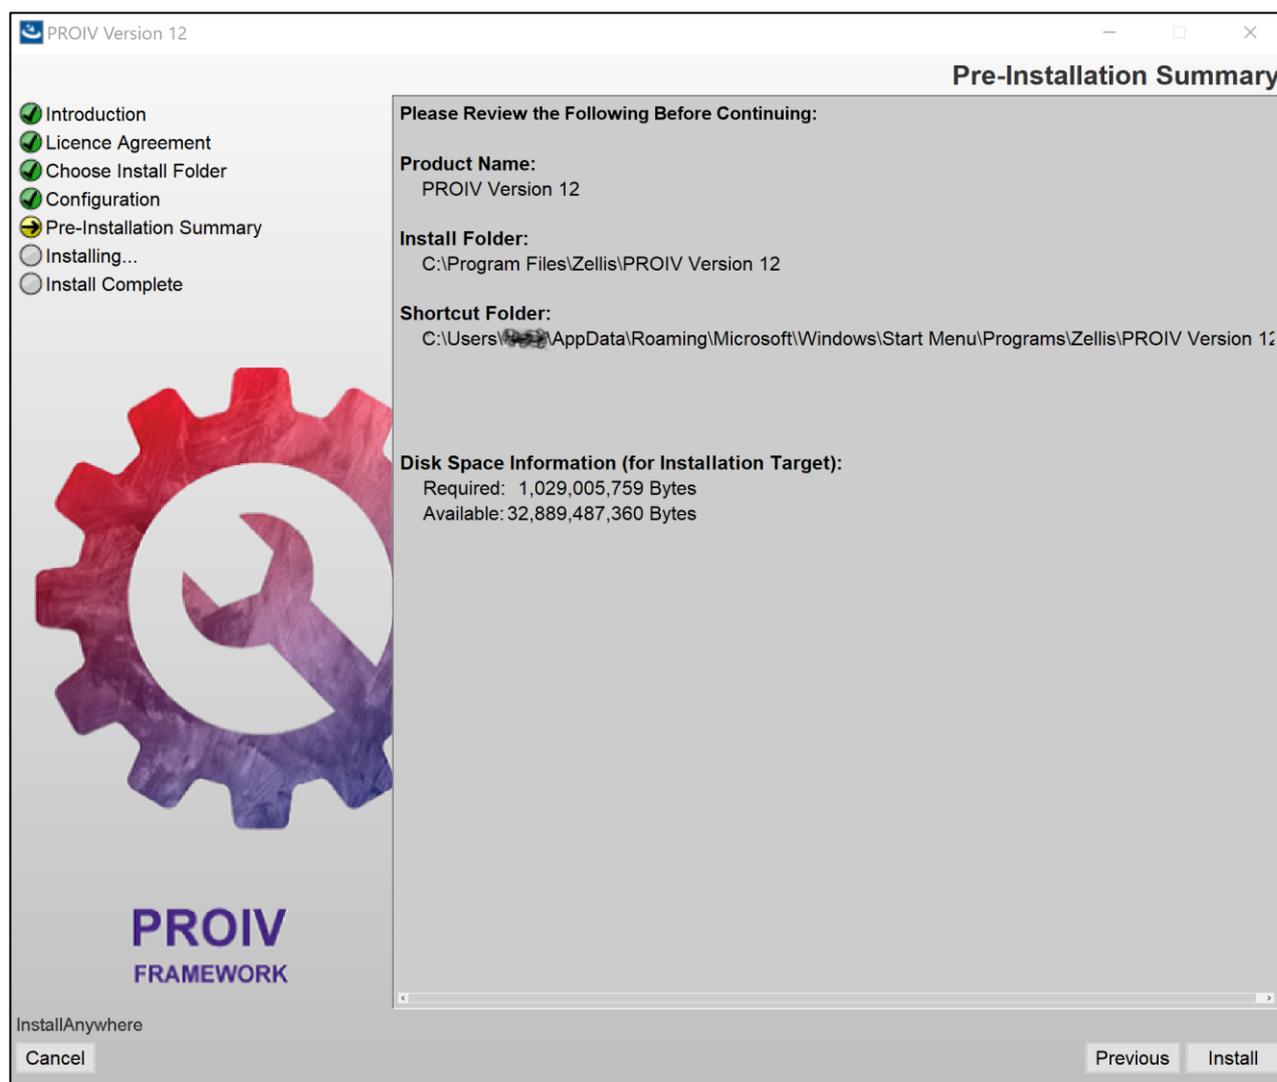

In the Web Application Server security group, you can setup the security for the web applications served as part of the PROIV installation. The username and password entered are then configured for each of the applications in your web application. However, you can change them after installation.

**Web Application Server Security**

User Name	<input type="text" value="admin"/>
Password	<input type="password" value="*****"/>
Verify Password	<input type="password" value="*****"/>

## Pre-Installation Summary

A summary of where the software is to be installed appears. Click Install to proceed.

On successful installation, the PROIV Version 12 – Install Complete panel appears and may prompt to restart the system. If such a prompt appears you can either restart the system immediately or later; however, it is recommended to restart the system before using PROIV in this instance.

## 3 Installing Server Software On UNIX

PROIV Version 12 server installation on UNIX platforms uses a command line interface rather than graphical one; the installer is provided as a binary executable and requires a minimum of Java 17 Runtime Environment installed on your system before starting to install PROIV Version 12.

Refer to the PROIV Release Notes associated with each release to get more information on the supported Java Runtime Environments (JRE) and locations where the installer searches for a JRE.

You can run the installer without any additional command line arguments and no longer need to do so as the root user. Installing as a user other than root requires additional steps these are covered below in section 3.11.

For example on a Linux 64-bit platform:

```
./proiv12.xxx.xx_linux_x86-64.bin
```

If PROIV is already installed on the server and you are performing a side by side install or an upgrade then ensure the PROIV and its services are not running before doing another install or upgrade.

The installation takes the form of an interactive console installation where you are prompted for installation location and various configuration parameters; once all information has been entered the product is installed and configured with the specified parameters.

The following sections detail an installation example on Linux; other UNIX platforms follow the same process.

### Upgrading an existing installation

#### 3.1.1 Upgrading to Version 12

PROIV version 12 is not 'gen' compatible with any previous versions of PROIV. A mandatory Rebuild of all code is required when moving to PROIV version 12. If you are upgrading from a previous major release, you must take a backup of your boots folder; export your application source code and import into v12 and then perform a rebuild of the application. Additionally, all existing set up options will need to be reconfigured using the PROIV Dashboard.

Note: Contact PROIV support for advice if upgrading from a much older versions of PROIV as additional steps may be required.

## Starting the Installation Process

Open the command prompt.

The installation on UNIX is started by running the distribution. Once started the installer will locate a suitable JRE and display the following screen.

The introduction section explains how to control the installation process.

```
Launching installer...

=====
PROIV Version 12                                     (created with InstallAnywhere)
=====

Preparing CONSOLE Mode Installation...

=====
PROIV Version 12 Installer Credentials
=====

The installation is progressing without root privileges. After this process is
completed, there will be additional steps to be performed manually with root
privilege for the installation to work as expected.

->1- Continue to Next
   2- Cancel

ENTER THE NUMBER OF THE DESIRED CHOICE, OR PRESS <ENTER> TO ACCEPT THE
DEFAULT: 
```

Press **Enter** to continue

## Accepting the Licence Agreement

```
This Agreement is made between you ("you") and PROIV Technology LLC,
("PROIV", "we", "us" or "our") for the PROIV software product ("Software")
enclosed. By installing, copying, downloading, accessing or otherwise using
the Software, you agree to be bound by the terms of this Agreement. If you do
not agree to the terms of this Licence Agreement, do not install or use the
Software and promptly return it to PROIV Technology LLC, 603 Seagaze Drive,
Suite 789, Oceanside, CA 92054, United States of America.
```

### 1. GRANT OF RIGHT LICENCE TO USE

```
PROIV grants you the non-exclusive, non-transferable, right to use the
Software. Notwithstanding any other provisions herein, the right to use this
Software is subject to and limited by the separate Software Licence Agreement
that states the number and purpose of users of this Software. Without such an
agreement in place this licence grants you a right to use for evaluation
purposes only.
```

### 2. RESTRICTIONS

```
If you are an entity, you shall supervise and control the use of the Software
and ensure that the Software is used by your employees and representatives in
accordance with the terms of this Agreement and the separate Software Licence
Agreement entered into between you and PROIV.
```

```
PRESS <ENTER> TO CONTINUE: █
```

The set of prompts allows you to scroll through the sections of the Licence agreement; you must read, and press enter to scroll through each section.

Once the licence agreement has been displayed you can choose to accept it to continue with the installation process. If you do not accept the agreement then enter **N** and the installation process will terminate.

## Specifying Installation Directory

Specify the folder into which PROIV is installed or alternatively press **Enter** to accept the default folder.

```
=====
Choose Install Folder
-----
Where would you like to install?

  Default Install Folder: /opt/zellis/proiv_version_12

ENTER AN ABSOLUTE PATH, OR PRESS <ENTER> TO ACCEPT THE DEFAULT
: /proiv12█
```

Note: The default installation folder has changed, to reflect the change in name of the PROIV holding company to Zellis.

## Specifying a Licence File During Installation

```
=====
Licence File Location
-----
```

```
Please type the full path name of a valid PROIV Version 12 Licence file or
just press enter to install the default Licence
```

```
Licence file location : |
```

Enter the location for your Licence File. If you do not have a License File, press **Enter** to install the default licence.

## Network Port Configuration

The installer then moves on to setting up the network listening ports, these are presented sequentially, either accept the default or specify the port you wish to use; for example.

```
=====
Web Application Server Ports
-----

Analytic Services Http (Default: 12805):

=====
Web Application Server Ports
-----

Analytic Services Https (Default: 12815):

=====
Web Application Server Ports
-----

System Services Http (Default: 12801):

=====
Web Application Server Ports
-----

System Services Https (Default: 12811):

=====
Web Application Server Ports
-----

Licence Services Http (Default: 12806): 
```

Enter the TCP/IP listening port numbers for all port types. All these ports must be unique. By default, the installation process offers ports which are not in use at the time.

**Note:** The installer will notify you if the port number entered is in use. You must re-enter the configuration information in this instance.

## External Database Configuration

To configure an external database, enter Y and specify the configuration details; the following screenshot shows how to configure the Oracle external database.

```
=====
Configure PROIV External Database Connection
=====

Configure PROIV External Database Connection (Default: Y):

=====
PROIV External Database Configuration
=====

Please indicate the database type

->1- Oracle
   2- PostgreSQL
   3- SQLServer

ENTER THE NUMBER FOR YOUR CHOICE, OR PRESS <ENTER> TO ACCEPT THE DEFAULT: [ ]
```

## Select Developer or Administrator

Select the PROIV Environment as either Developer or Administrator, the default is Developer.

```
=====
PROIV Environment
-----

Please choose between Developer or Administrator Environment

->1- Developer
    2- Administrator

ENTER THE NUMBER FOR YOUR CHOICE, OR PRESS <ENTER> TO ACCEPT THE DEFAULT: |
```

Optionally choose to install the demo functions

To install the demonstration files and functions, enter **1**.

The PROIV Demonstration Files includes several applications which provide examples of PROIV Version 12 functionality.

```
=====
Install PROIV Demonstration sample applications
-----

Please select the option below to have PROIV demonstration applications
installed

->1- Install Demonstration Files
    2- Not Required

ENTER THE NUMBER FOR YOUR CHOICE, OR PRESS <ENTER> TO ACCEPT THE DEFAULT: [
```

## Configure Web Application Security

Configure PROIV web application security, enter the user name and password (twice); the credentials will be required to access the PROIV Version 12 Dashboard.

```
=====
Web Application Server Security
-----
Please enter a user name
User name (Default: admin): [ ]
```

## Installation Summary and Install

```

=====
Pre-Installation Summary
-----

Please Review the Following Before Continuing:

Product Name:
  proiv_version_12

Install Folder:
  /opt/zellis/proiv_version_12

Link Folder:
  /opt/zellis/_proiv_version_12_

Disk Space Information (for Installation Target):
  Required:  1,319,224,543 Bytes
  Available: 5,638,139,904 Bytes

PRESS <ENTER> TO CONTINUE: 

```

The installation summary appears with the installation location and the space required, press **Enter** to continue.

Press **Enter** twice to begin the installation and configuration.

The software is installed and configured. Press **Enter** to exit the installation process.

```

=====
Installation Complete
-----

Congratulations. proiv_version_12 has been successfully installed to:

  /opt/zellis/proiv_version_12

PRESS <ENTER> TO EXIT THE INSTALLER: 

```

## Installation differences when not installing as root

If you choose to install as the non-root user then the first screen you will be presented with is a credentials acceptance dialog; this is to remind you that you are not running as root and that additional steps are required to be run as root to complete the installation process.

Note: When installing on IBM AIX as a non-root user the installation command requires additional parameters to specify the Java Virtual Machine (JVM) to use during the installation process. Add the following to your usual command line, including a single space character:

LAX\_VM <path to java virtual machine>

```
=====
PROIV Version 12 Installer Credentials
-----
```

```
The installation is progressing without root privileges. After this process is
completed, there will be additional steps to be performed manually with root
privilege for the installation to work as expected.
```

```
->1- Continue to Next
    2- Cancel
```

```
ENTER THE NUMBER OF THE DESIRED CHOICE, OR PRESS <ENTER> TO ACCEPT THE
DEFAULT: | |
```

Enter 1 to accept there are additional steps and to continue with the installation.

Entering 2 will cancel the installation and allow you to re-run it as root if that is your wish.

The rest of the installation is as per earlier sections. Once the files are loaded and the configuration settings applied you will be presented with an additional information panel.

```
=====
Installation Complete
-----
```

```
This installation of proiv_version_12 was not performed as root, you need to
run /home/ /proiv12/bin/service.sh as root to install the PROIV services on
your operating system.
```

```
PRESS <ENTER> TO EXIT THE INSTALLER: |
```

To complete the installation, you need to run the script service.sh, this can be found in the bin directory underneath the root of the installation. To install the services run the script as root and the services will be installed for your chosen operating system; for Linux this is systemd for AIX and Solaris it will be via init.d. The example below is from RedHat Linux.

```
sudo: service.sh: command not found
non-root> sudo ./service.sh
Usage: ./service.sh [install | remove]
    install - Installs PROIV services from current installation directory
    remove  - Removes *any* currently installed PROIV services on the system
non-root> sudo ./service.sh install
Stopping services.....
Copying isamlog and isamdef into /etc
Installing services from /home/ /proiv12
```

On RedHat with systemd you can list the services as follows:

```
non-root> systemctl list-units p4* | grep V12
p4analytics12.service loaded active running PROIV V12 Analytic Services
p4appcon12.service   loaded active running PROIV V12 Application Connector
p4clicon12.service   loaded active running PROIV V12 Client Connector
p4licensing12.service loaded active running PROIV V12 Licence Services
p4system12.service   loaded active running PROIV V12 System Services
p4taskserver12.service loaded active exited PROIV V12 Task Server Services
```

Note that if you install on Linux which does not support systemd then the services will not be installed.

### 3.1.2 File Permissions

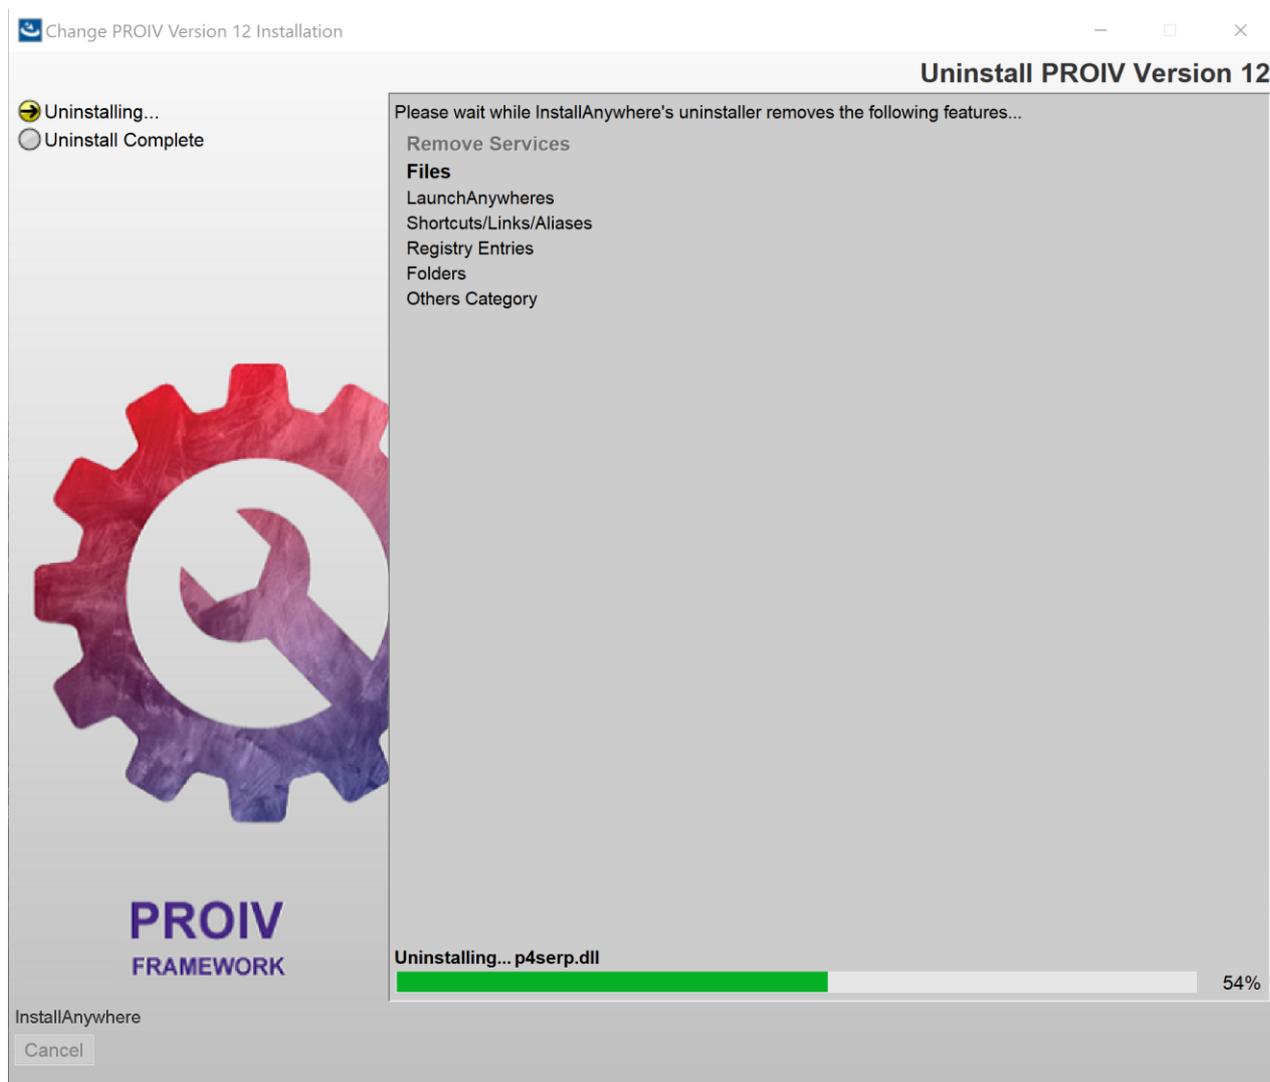

When not installed as root, the PROIV installation files are owned by the user running the installation process. If you change permissions on files and directories, then you will need to ensure that the PROIV components which access them can, otherwise the installation may generate errors or warnings.

## 4 Uninstalling Server Software on Windows

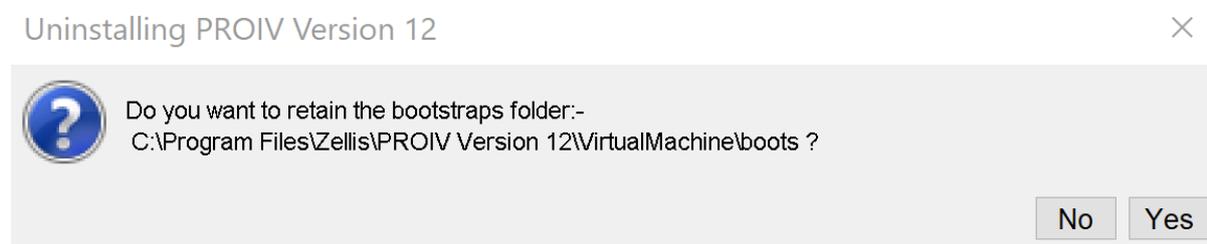

Follow these steps to uninstall the server software on Windows.

- Click the Windows key and type “**Add or Remove Programs**”.
- In the list of Apps find and click on “**PROIV Version 12**”.
- Click on the “**Uninstall**” option that is displayed.

The progress of each stage of the uninstall process appears in a panel, as in the screen shot below.

A pop-up window appears to confirm your wish to retain the bootstraps folder. If you wish to retain the bootstraps, click **Yes**.

When the uninstall process completes, it reports a list of all folders where it was unable to remove all the content. These folders contain files which are added outside of the installation process. They may contain, for example, log files which are created by PROIV during execution. This is perfectly normal and these folders can be deleted should you no longer need them.

## 5 Uninstalling Server Software On UNIX

To uninstall PROIV on a UNIX system, login as root (or whatever user id has permissions to perform the necessary file delete operations), navigate to the top-level folder of your PROIV installation; if you did a default install, then:

```
/opt/zellis/proiv_version_12/_proiv_version_12_
```

Execute the uninstall command as appears in the following snapshot.

Once the uninstall process starts, press **Enter** to continue with the product removal process.

```
>>> ./Uninstall
=====
proiv_version_12                               (created with InstallAnywhere)
=====
Preparing CONSOLE Mode Uninstallation...

=====
Uninstall proiv_version_12
-----

About to uninstall...

proiv_version_12

This will remove features installed by InstallAnywhere.  It will not remove
files and folders created after the installation.

PRESS <ENTER> TO CONTINUE:
```

If you wish to keep the bootstraps, enter 1.

```
=====
Uninstalling PROIV Version 12
-----

Do you want to retain the bootstraps folder
/opt/zellis/proiv_version_12/virtual_machine/boots ?

->1- Yes
   2- No

ENTER THE NUMBER OF THE DESIRED CHOICE, OR PRESS <ENTER> TO ACCEPT THE
DEFAULT: 1
```

```
*
*****
*****
*****
*****

-----
Uninstall Complete
-----

All items were successfully uninstalled.
```

The uninstallation of the software is now completed. If items could not be uninstalled the message “Some items could not be removed” will be displayed and these will have to be removed manually.

## 6 Client Software

### Client Installation

The PROIV MFC Client and Forms Designer are distributed as a single installation executable as per previous releases of the product. To install the software, double-click the installation executable.

The installation takes the form of a set of wizards, which you move forward or backward by using **Previous** and **Next** options. However, if you wish to abort the installation then click **Cancel**.

#### 6.1.1 Upgrading

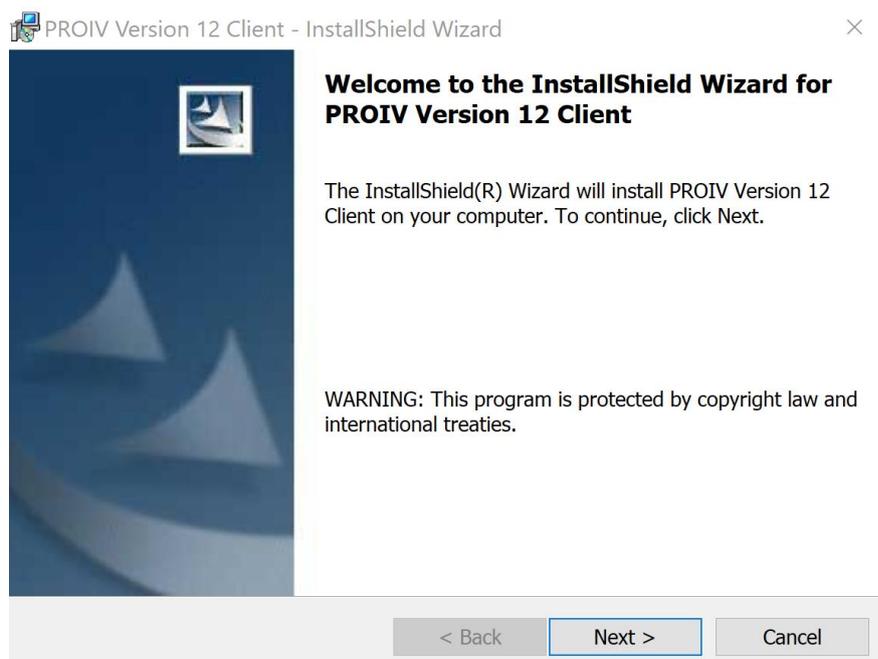

We would recommend uninstalling any previous versions of the MFC client prior to installing this new version. If you wish to keep previous settings you can export the HKEY\_CURRENT\_USER/Software/Zellis branch to a registry file and re-import when installation is complete. This requires administrator access and should only be carried out by a competent individual.

#### 6.1.2 Installer Preparation

A window appears that indicates the installer is preparing to install and indicates the progress through this preparation. The only option available to the user at this time is Cancel, which if pressed will cancel the installation process.

#### 6.1.3 Installer Commencement Panel

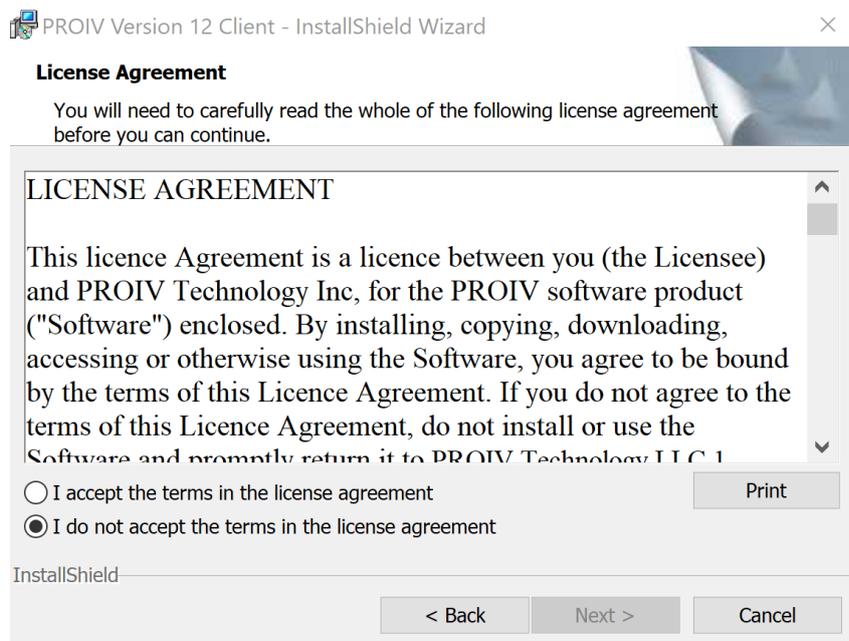

When the installer preparation is complete the welcome panel appears:

Click **Next** to continue with the installation or cancel to abandon the installation.

### 6.1.4 Client Licence Agreement

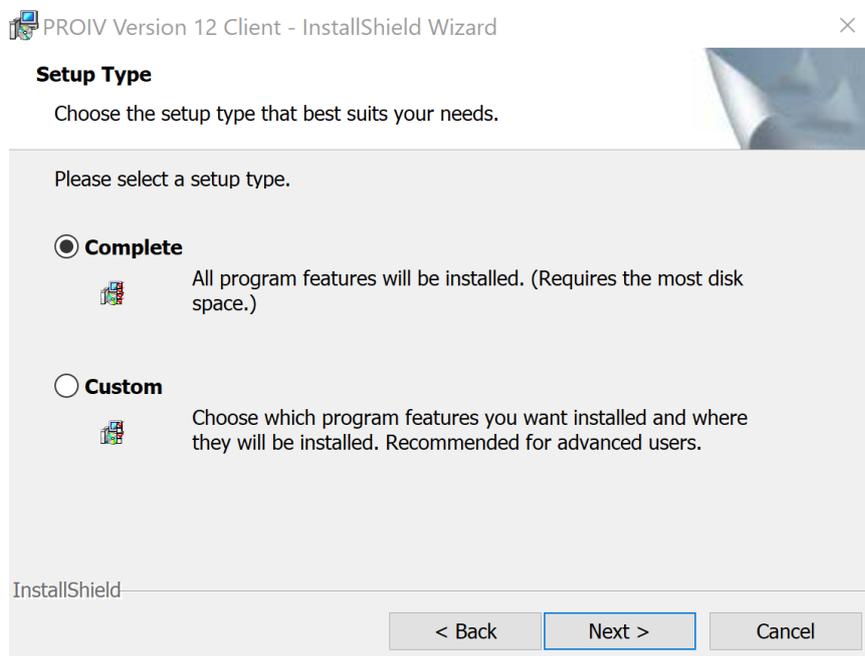

To install the software, you must accept the licence agreement, scroll the licence agreement to the bottom and click “I accept the terms of the Licence Agreement”.

**Note:** You cannot select this without scrolling to the bottom of the agreement; this ensures you have read the terms of the licence.

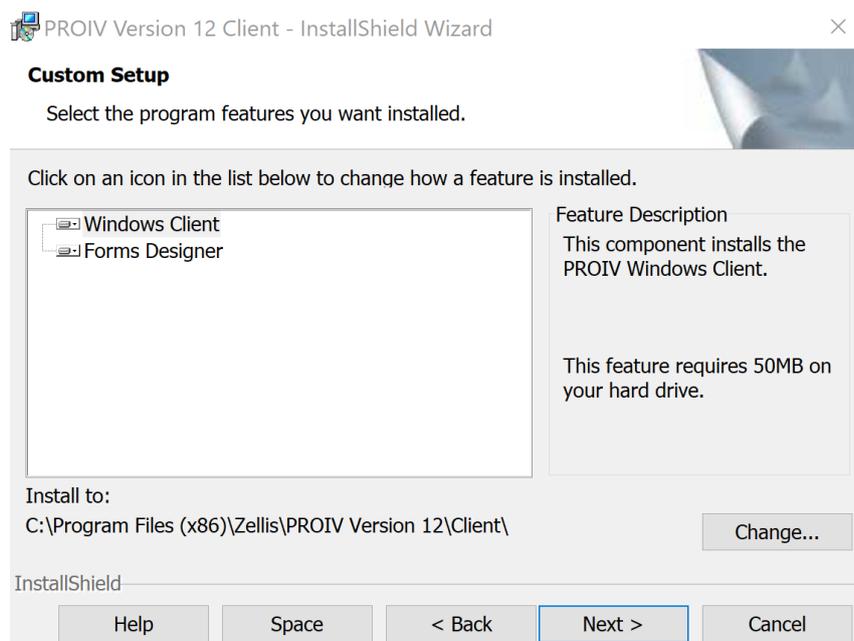

### 6.1.5 Installation Type

The PROIV MFC Client can be installed as one of the two types ‘Complete’ and ‘Custom’. **Complete** installs the PROIV MFC Client with all available features whereas **Custom** installs the selected features.

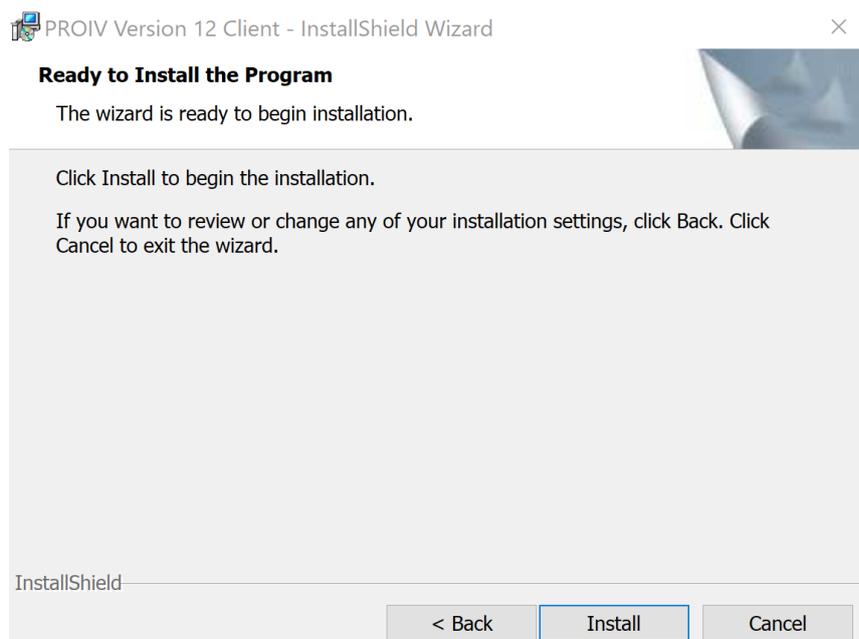

### 6.1.6 Custom Setup Panel

This wizard appears only if you select 'Custom' in the previous panel. Select the required components for installation.

Note: The default installation folder has been changed to reflect the new name of the PROIV holding company (Zellis). It is recommended that you perform an uninstall of all previous versions of the Client (installed as NorthgateArinso) prior to installing version 12.

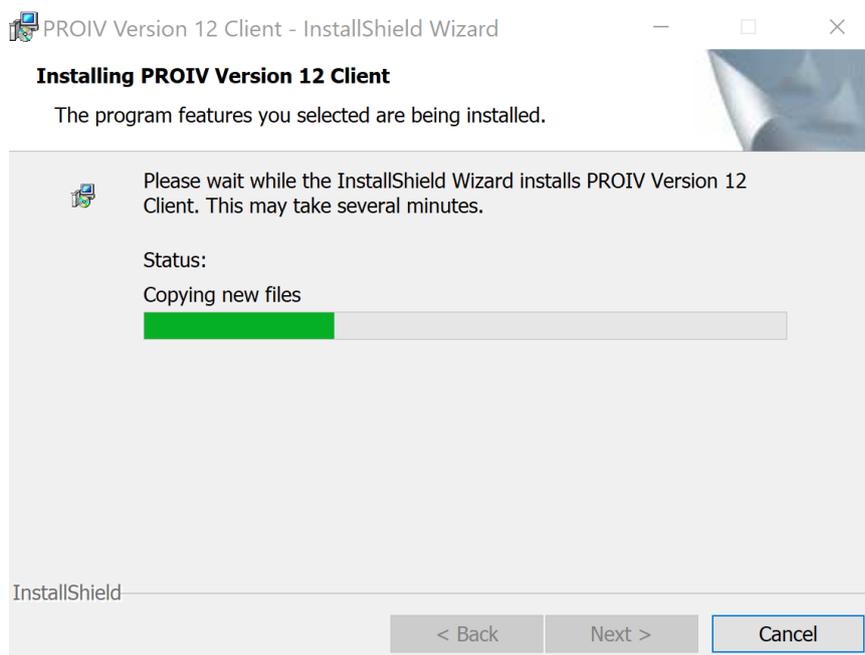

### 6.1.7 Ready To Install Panel

Click **Install** to begin the installation, **Back** to navigate to the previous wizard panels or **Cancel** to abandon the installation.

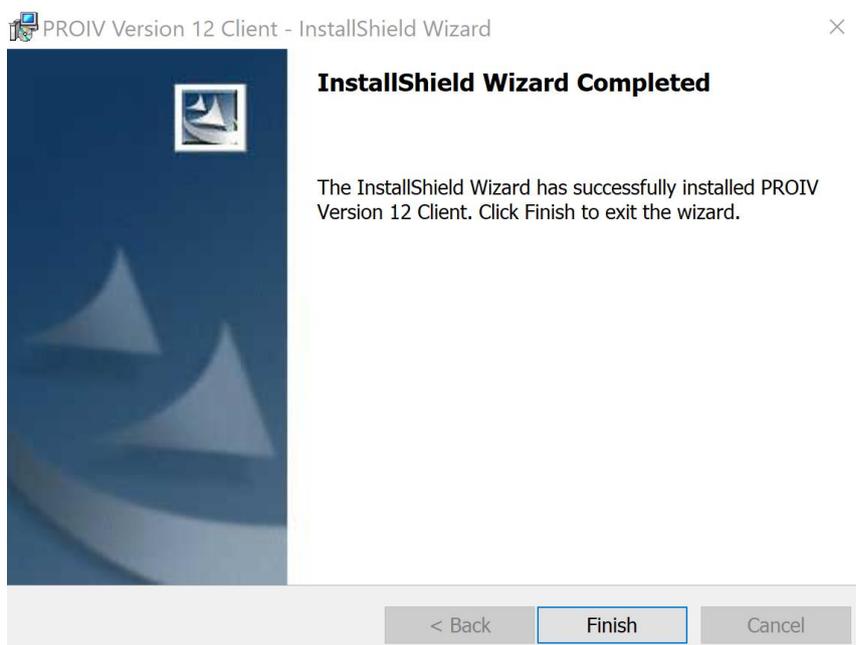

### 6.1.8 Installation Progress

The status bar indicates the progress of the installation.

### 6.1.9 Installation Complete

When the installation is complete, the following screen appears. Click **Finish**.

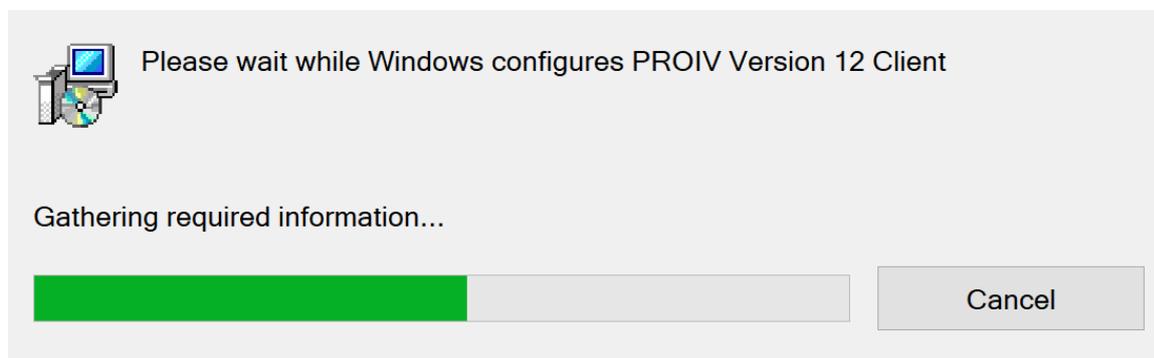

## Client Uninstallation

Uninstalling the PROIV client is a simple process, ensure you are logged in as a user with the correct access rights and then type Add or Remove Programs in the Windows search box. Scroll down the Apps and Features List and click on "PROIV Version 12 Client". Click the Uninstall button to commence.

The uninstall will start and display a small window showing the uninstall progress, once complete the client will have been removed from the system.

### PROIV Version 12 Client

When the uninstall process is complete the uninstaller closes without user interaction.

## 7 Document Control
